

FELIPE DIOGO

Automation Engineer · Python Developer · Low-Code / No-Code & AI Workflows

Lisbon, Portugal | Open to relocation within EU or US

☎ +351 928 381 366 ✉ felipe.g.diogo@gmail.com  [Linkedin](#)  [Github](#)  [Personal Website](#)

Summary

Automation engineer and Python developer with 3+ years building end-to-end automation systems across the full spectrum: low-code (n8n, Make, Zapier, Node-RED), pro-code (Python, JavaScript/TypeScript, FastAPI, Node.js), and full-stack web apps (Next.js, React, Supabase) when the work calls for it. Comfortable owning a project solo from requirements to production: architecture, APIs, deployment, observability and iteration. AI is not an accessory in my workflow, it is the core: Claude Code, OpenAI API and custom AI agents are part of every real engineering day, and I design automations with LLMs as first-class components (extraction, routing, approval loops, natural-language insight generation). An engineering foundation in control and automation gives me a practical edge with systems that must actually run in production: reliable messaging, idempotency, retries, monitoring, secure deployment. Autodidact, genuinely curious, quick to learn a new stack and put it to work. Actively seeking an Automation Engineer or Python Developer role; Movewer Technologies will continue in an advisory capacity to ensure full commitment to the new role.

Technical Skills

Automation & Workflows: n8n, Make, Zapier, Node-RED, Microsoft Power Automate, event-driven pipelines, webhooks, scheduled jobs, human-in-the-loop approval flows (Telegram, email), integration across SaaS APIs (Google Workspace, Notion, Slack, LinkedIn, etc.).

AI & GenAI: OpenAI API, Claude Code, Anthropic API, AI agents, prompt engineering, LLM-in-the-loop workflows, Retrieval-Augmented Generation patterns, AI-augmented monitoring and reporting, Copilot-style coding setups, Azure OpenAI (familiar).

Languages: Python, JavaScript / TypeScript, Bash, HTML/CSS, SQL; some Rust and C/C++.

Backend & APIs: FastAPI, Node.js, Express.js, REST, WebSockets, Supabase Edge Functions, webhook design, retries and idempotency, authentication and session handling.

Frontend & Full-Stack: Next.js, React 19, TypeScript, Tailwind CSS, PWA, mobile-first UI, interactive dashboards.

Data & Observability: PostgreSQL, SQLite, InfluxDB (time-series), Supabase, pandas, ETL/ELT pipeline design, Grafana, Power BI, Node-RED flows, Telegraf.

Cloud, DevOps & Infra: Docker and Docker Compose, Linux / VPS deployment, Git/GitHub, GitHub Actions (CI/CD), Nginx, Vercel, Let's Encrypt / TLS, systemd, AWS (familiar), Raspberry Pi, NVIDIA Jetson Nano.

Tools & Methodologies: VS Code, Cursor, Replit, Jira, Scrum / Kanban, system architecture, technical documentation, API versioning, test design.

Industrial Protocols & IoT (Differential): MQTT, OPC-UA, Modbus, SCADA, embedded firmware, Industry 4.0 integration, edge-to-cloud pipelines.

Experience

Movewer Technologies

Jun. 2025 – Present

Founder & Lead Automation Engineer

Lisbon, Portugal

- Designed and deployed a production IoT monitoring and automation platform (MQTT, Node-RED, Telegraf, InfluxDB, Grafana, Python) with an AI layer that turns raw sensor streams into actionable natural-language insights exposed via REST APIs and webhooks.
- Containerized the full stack with Docker Compose, deployed on a Linux VPS with GitHub Actions CI/CD, Nginx with Let's Encrypt, encrypted backups and six-layer security; served the production frontend on Vercel.
- Built automation workflows connecting edge devices (Raspberry Pi) to cloud dashboards: ingestion, processing, real-time alerting, scheduled reporting, and AI-driven summaries delivered through messaging channels.
- Sole technical owner across the full development lifecycle (requirements → architecture → code → deployment → iteration), supported by heavy use of Claude Code and AI agents as a daily force multiplier on output and review.

- Wrote and maintained technical documentation including architecture diagrams, data flow and user guides for each automation in production.

Personal Projects & Independent Work

2025 – Present

Full-Stack Developer & Automation Engineer

Lisbon, Portugal

- Built a LinkedIn content automation pipeline with n8n and Make: generates draft posts from predefined topics, routes approval via a Telegram bot, and auto-publishes to LinkedIn on confirmation. Human-in-the-loop design over pure auto-posting.
- Developed Julius, an AI-powered personal-finance PWA (Next.js 15, Supabase/PostgreSQL, OpenAI API) where an AI agent extracts, categorizes and persists financial entries from natural-language user input, then renders interactive dashboards.
- Shipped Python ETL pipelines that pull from REST APIs, transform with pandas and persist to PostgreSQL on a schedule; reusable patterns applied across several personal automation tools.
- Built internal tooling around Claude Code and the OpenAI API (custom agents, prompt templates, code-review and data-exploration assistants) to push the practical ceiling of single-engineer productivity.

Psyche AeroSpace

Jun. 2024 – Jun. 2025

Automation Executive Manager / Engineering Team Lead

São Paulo, Brazil

- Built internal automation workflows with Python, Node.js and low-code tools to remove manual steps from team operations and speed up prototyping cycles.
- Led a cross-functional team of 5 engineers using Scrum/Kanban on Jira, coordinating multi-project delivery on time and within budget.
- Translated complex operational requirements into technical user stories, functional workflows and automation logic, bridging business stakeholders and engineering execution.

Controvale

Jun. 2018 – Jun. 2024

Automation Engineer

São Paulo, Brazil

- Developed and deployed industrial automation systems combining IoT connectivity, SCADA supervision and data-flow integration; built deep expertise in end-to-end process automation and system integration.
- Executed full project cycles: system design, programming (Python, structured text, ladder logic), testing, troubleshooting and client-facing technical documentation and handover.
- Built a portfolio of 35+ long-term industrial client partnerships over six years, providing technical pre-sales, integration and post-deployment support.

Projects

LinkedIn Content Automation | *n8n, Make, JavaScript, Telegram Bot API, AI Agent, Process Automation* **Mar. 2026**

- Social-media pipeline built on n8n and Make: ingests topics, generates posts via an AI agent, routes them to the user through a Telegram bot for approval, and publishes to LinkedIn on confirmation. Hybrid low-code / pro-code flow with webhooks and scheduled triggers. [Click to check it](#)

Julius — AI Personal Finance PWA | *Next.js 15, TypeScript, Supabase, OpenAI API, PWA*

Feb. 2026

- Mobile-first PWA where users input expenses in natural language; an AI agent extracts vendor, amount, category and date and logs structured entries to Supabase (PostgreSQL + Edge Functions). Per-user accounts, spending dashboards with category and period filters, and app settings. Example of LLM-as-a-component inside a real product rather than a chat box. [Click to check the live version](#)

AI Data Platform | *Python, MQTT, Node-RED, InfluxDB, Docker, REST API, AI Integration, VPS*

Jan. 2026

- Production IoT monitoring and automation platform: edge node (Raspberry Pi) ingests field signals via MQTT into InfluxDB time-series, a Python analytics layer runs detections, and a custom REST API exposes AI-generated natural-language insights. Containerized with Docker, self-hosted on VPS with CI/CD, TLS and encrypted backups. [Click to check it](#)

Education

Federal Institute of São Paulo (IFSP)
Bachelor of Control and Automation Engineering

Jan. 2019 – Dec. 2023
São José dos Campos, Brazil

Self-Directed Software, Automation & AI Engineering
freeCodeCamp, One Bit Code, hands-on project work with LLM tooling and automation platforms

2022 – Present
1000+ hours

Languages

Portuguese — Native **English** — Advanced (C1) **Dutch / French / German** — open to learning for role
