Summary

IT Automation Developer with 4+ years of experience building end-to-end automation systems, now fully focused on IT automation, AI-driven workflows, and low-code/pro-code solutions. Track record delivering production-grade platforms integrating Python, Node-RED, MQTT, REST APIs, and generative AI. Experienced with n8n, event-driven pipelines, and cloud-connected data architectures. Comfortable owning full dev cycles from requirements to deployment and collaborating with international cross-functional teams.

Technical Skills

Automation & Workflows: n8n, Node-RED, REST/Webhook APIs, MQTT, event-driven pipelines, Power Automate (flow design patterns), Zapier/Make (familiar)

AI & GenAI: OpenAI API, prompt engineering, AI-augmented monitoring, LLM workflow integration, Copilot-style tooling, Azure OpenAI (familiar)

Languages: Python, JavaScript / TypeScript, Bash, HTML/CSS, SQL

Data & Observability: InfluxDB (time-series), Grafana, Power BI, data pipeline design

Cloud & Infra: Linux / VPS deployment, Git / GitHub, CI/CD practices, Docker (basics), Raspberry Pi, Jetson Nano

Dev & Low-Code Tools: VS Code, Cursor, Replit, JIRA, Scrum / Kanban

Protocols & IoT: MQTT, OPC-UA, Modbus, SCADA, embedded systems, Industry 4.0

Experience

Founder & Lead IT Automation Engineer

Jun 2025 – Present

Movewertech Technologies (Startup)

Lisbon, Portugal

- Architected and deployed **MOV Platform** – a full-stack IoT monitoring solution on a Linux VPS using MQTT, Node-RED, InfluxDB, and Grafana, with an AI layer that generates actionable insights from raw sensor streams.
- Designed end-to-end automation workflows connecting edge devices (Raspberry Pi) to cloud dashboards, covering data ingestion, processing, real-time alerting, and AI-driven reporting via REST APIs and webhooks.
- Built and maintained technical documentation including architecture diagrams, process flows, and user guides for all deployed automations.
- Sole technical owner across full dev lifecycle: requirements gathering → architecture → deployment → iteration.

Automation Executive Manager

Jun 2024 – Jun 2025

Psyche AeroSpace (Startup)

São Paulo, Brazil

- Structured the automation division from scratch and delivered intelligent control and workflow systems, contributing directly to new fundraising rounds.
- Managed a team of 5 engineers using Scrum/Kanban on JIRA, coordinating multi-project delivery on time and within budget.
- Translated complex operational requirements into technical user stories, functional workflows, and automation logic – bridging business stakeholders and engineering execution.
- Drove process automation decisions, optimizing repetitive workflows and integrating intelligent control logic across distributed systems.

Automation & Application Junior Engineer

Jun 2018 – Jun 2024

Controvale (Automation Company)

São Paulo, Brazil

- Developed and deployed industrial automation systems with IoT, SCADA, and data-flow integrations – building deep expertise in end-to-end process automation and system integration.
- Executed full project cycles: system design, programming (Python, structured text), testing, troubleshooting, and client-facing technical documentation and handover.
- Built commercial automation partnerships with 35+ companies (Siemens, Bosch, Rockwell), developing strong requirements-gathering and technical communication skills.

Education

Federal Institute of São Paulo

Bachelor of Control and Automation Engineering

Jan 2019 – Dec 2023

São José dos Campos, Brazil

Programming & Software Development

2022 – Present

freeCodeCamp · One Bit Code · Self-directed study

500+ hours

- Focus areas: IT Automation, AI Workflows & Prompt Engineering, Data Pipelines, Python, JavaScript / TypeScript, Web Development, CI/CD, Cloud & VPS Deployment, IoT & OT/IT Integration.

Projects

Julius – AI-Powered Personal Finance Bot | *n8n, OpenAI API, Google Sheets, Webhooks, Prompt Eng.*

Feb 2026

- Built a fully automated personal finance workflow in n8n: receipts are sent via chat, an AI agent (OpenAI) extracts structured data (vendor, amount, category, date), and automatically logs entries into a Google Sheets ledger – no manual input required.
- Extended Julius with a conversational layer acting as a personal financial manager: users can query spending summaries, category breakdowns, and budget insights via natural-language chat, with responses grounded in live spreadsheet data.
- Designed the full workflow architecture including webhook triggers, AI prompt engineering for reliable structured extraction, error handling, and dynamic Sheets integration.

MOV Platform | *Python, Node-RED, MQTT, InfluxDB, Grafana, AI Integration, VPS, REST APIs*

Jan 2026

- Production-deployed IoT + AI monitoring platform. Edge node (Raspberry Pi + Node-RED) ingests field signals via MQTT; pipeline stores data in InfluxDB; Grafana surfaces dashboards; custom AI layer delivers natural-language insights beyond raw metrics.
